## DETAILED ACTION

### *Response to Arguments*

1. Applicant's arguments with respect to claims 1-18 have been considered but are moot in view of the new ground(s) of rejection.

### *Double Patenting*

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-18 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-14 of U.S. Patent No. (not yet assigned, U.S. application NO. 09/304,959). Although the conflicting claims are not identical, they are not patentably distinct from each other because the application's claims merely broaden the scope of the patented claims by not claiming some elements (i.e. expansion port, high speed port). The application's claims are nearly identical in every other respect to the patent claims. Therefore, the application's claims are simply broader version of the patented claims. It is the examiner's position that broadening the patented claims by not claiming some of claim elements (i.e.

expansion port, high speed port) of the patented claims would have been obvious to one of the ordinary skill in the art in view of the patented claims.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

4. Claims 1-18 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Wu et al. (US 5,771,234).

Wu et al. discloses a system for scheduling the assignment and writing of the cells from cell sources comprising the following features: a plurality of receive ports for receiving data cells from different data sources; a processor for scheduling transmission of the received data cells to a transmit port; a plurality of FIFO for receiving data cells from data sources; the processor for receiving data cells from the FIFO in successive time slots to identify the transmit port for each data cells, and for dynamically allocating each of the time slots to the FIFO in accordance with different types of cells. See column 5-6.

***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Art Unit: 2664

Koenig et al. (US 6,101,198) discloses a technique for performing a time slot interchange in a processor.

Christensen (US 6,069,878) discloses a TDM digital matrix intercom system.

Kolbenson et al. (US 5,594,727) discloses a telephone switch providing dynamic allocation of time division multiplex resources.

Chen et al. (US 4,999,832) discloses a broadband multirate switching architecture.

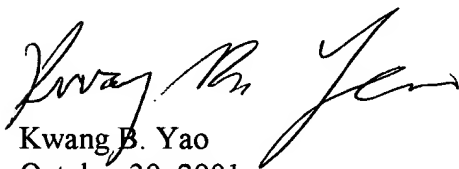

Baxter et al. (US 4,809,270) discloses a variable time slot communication system.

Barbe et al. (US 4,805,172) discloses a time division multiplex switching system.
